Histogram40: frozen and adapted policies during federated learning

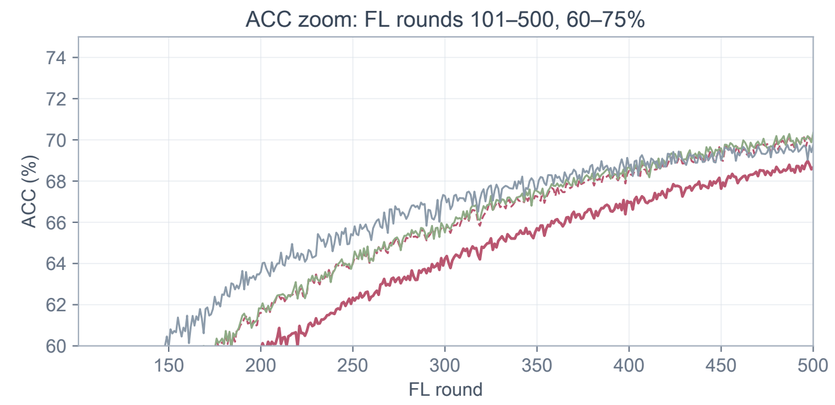

CIFAR-10 / CIFAR10CNN / IID / 20 clients, all participate / 4 malicious (2 + 2) / train seed 42, query seed 43

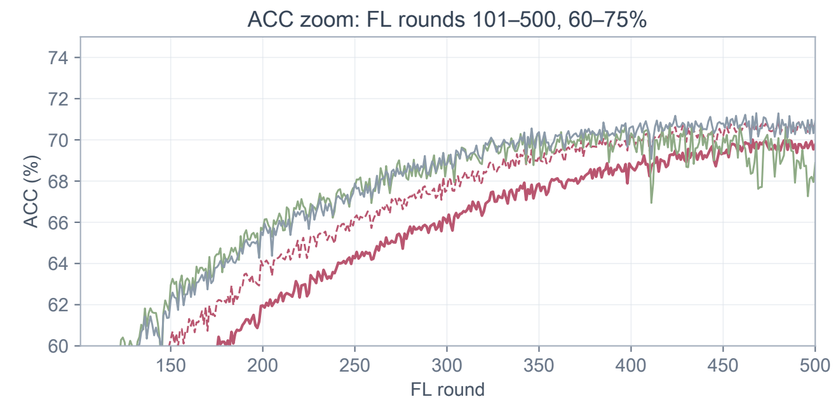

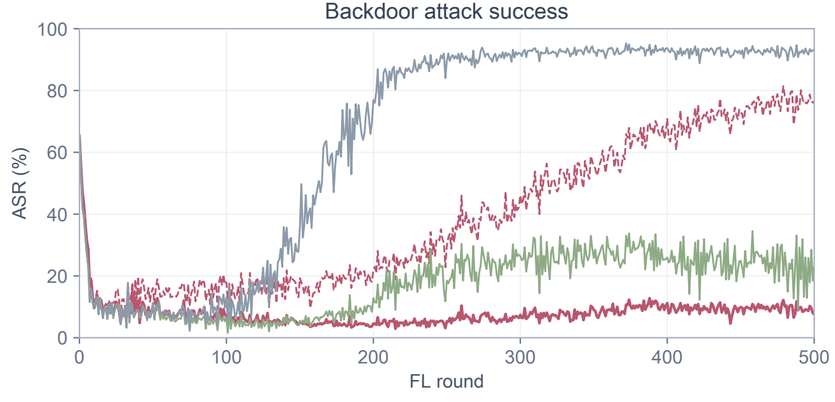

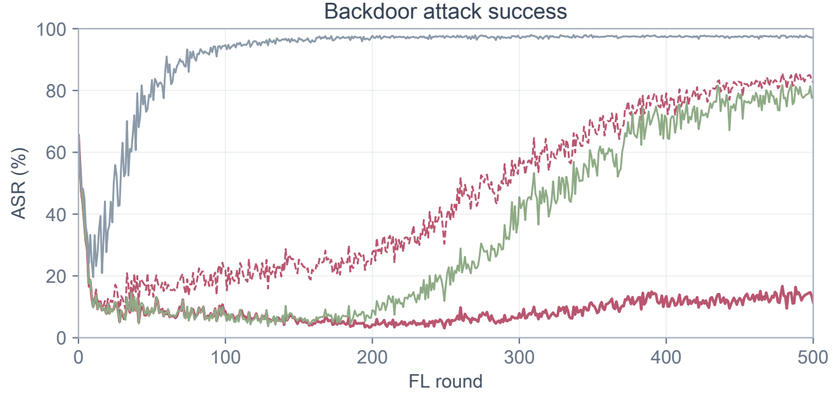

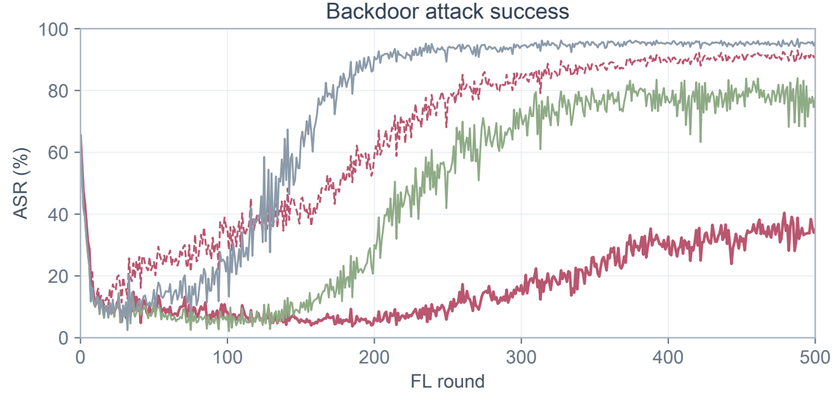

Meta-SG frozen · Meta-SG adapted: S20/C50 · Joint adapted: S20/C50 · Random adapted: S20/C50

All queries reset the FL model and freeze the policy for 500 rounds. No query adaptation. Raw measured curves; one seed; no smoothing.
Adapted = 20 shared support rounds, 50 critic + 25 base actor + 25 extra mean-Q actor updates. Dashed rose = Meta-SG without adaptation.
Local SGD: 5 steps, batch 128, learning rate 0.05. Rank window: FL rounds 491–500. Zoom panels repeat ACC on explicitly restricted axes.
