Shared RL: pooled single attacks vs. simultaneous attack pairs

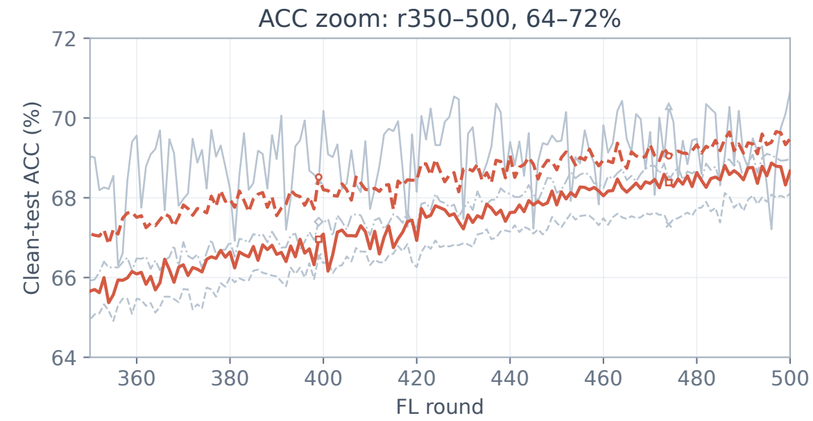

CIFAR-10 / CIFAR10CNN / IID / 20 clients, all participate / 4 malicious (2 + 2) / frozen 500-round queries

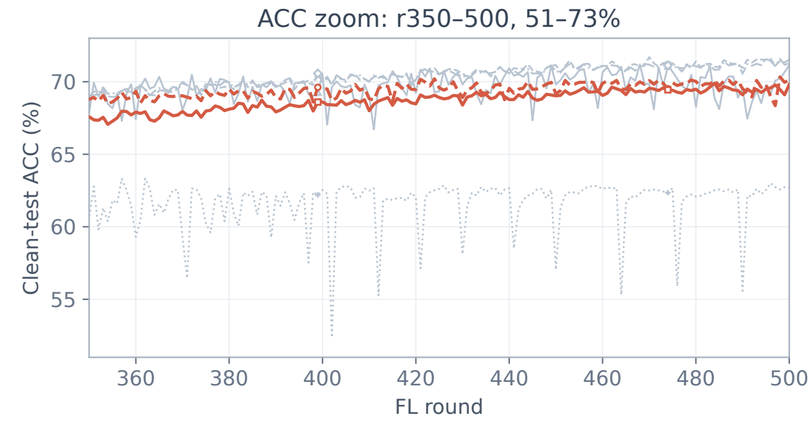

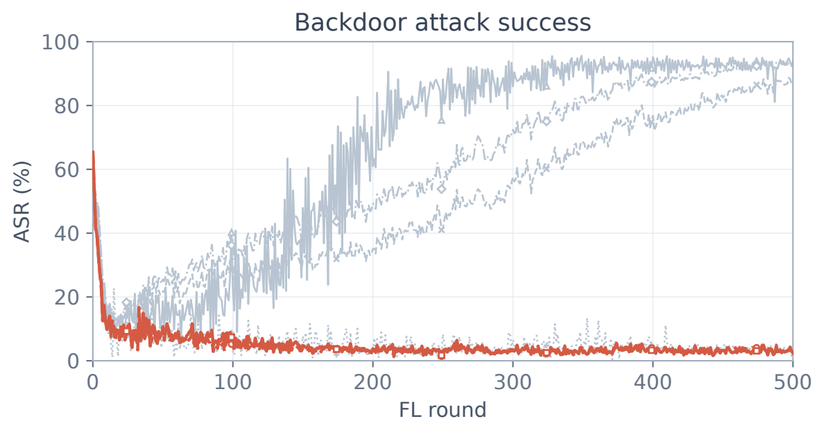

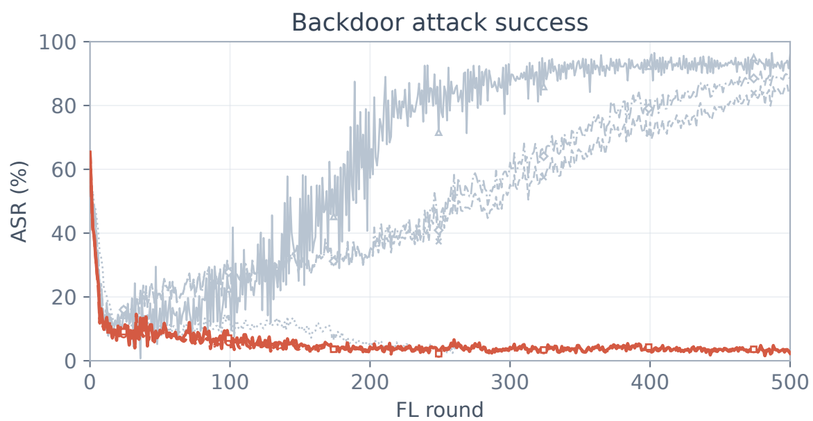

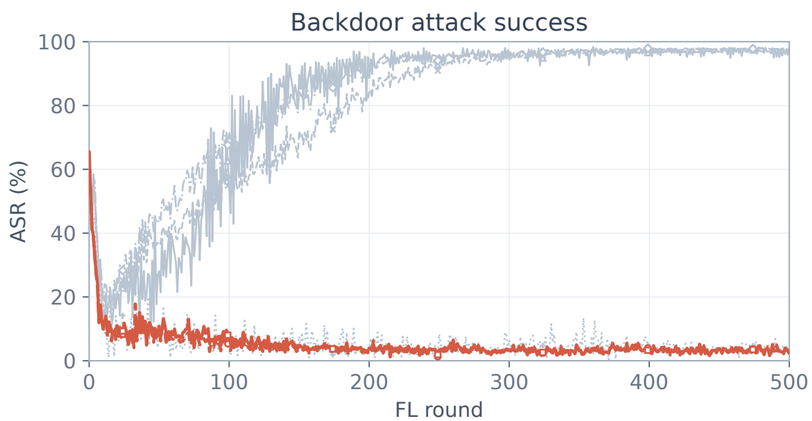

FLTrust · Median · TrimMean · Krum · RL-A · RL-B

RL-A: single-attack trajectories pooled into one training bank. RL-B: simultaneous-pair trajectories pooled into one bank. One policy per variant.
Unsmoothed observed curves. Rank window: 491–500. Krum attack-construction failure: measured prefix only; no post-failure extension.
Local / root steps 5; malicious steps 10; batch 128; SGD lr 0.05; train / query seed 42 / 43. DBA+BFL / BFL held out from training.
